

Dropizol® 10 mg/ml oral drops, solution

Morphine in opium tincture

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist or nurse.
- This medicine has been prescribed for you only. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.
- If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. See section 4.

What is in this leaflet

- 1. What Dropizol is and what it is used for
- 2. What you need to know before you take Dropizol
- 3. How to take Dropizol
- 4. Possible side effects
- 5. How to store Dropizol
- 6. Contents of the pack and other information

1. What Dropizol is and what it is used for

Dropizol is an herbal medicinal product that contains morphine.

Dropizol belongs to a group of medicines called antipropulsives and is used in adults to treat symptoms of severe diarrhoea, when use of other anti-diarrhoea treatments have not given sufficient effect.

Dropizol works by inhibiting the movements of the intestine.

2. What you need to know before you take Dropizol

Do not take Dropizol:

- If you are allergic to opium or morphine or any of the other ingredients of this medicine (listed in section 6)
- If you have opiate dependency
- If you suffer from glaucoma (raised pressure in the
- If you have severe liver or kidney disease
- If you have alcohol withdrawal symptoms (delirium tremens).
- If you have a severe head trauma If you are at risk of paralytic ileus (obstruction of the
- intestine due to paralysis of the intestinal muscles) If you suffer from acute asthma
- a chronic pulmonary disease that makes it hard to breathe (COPD)
- If you have breathing problems because of severe respiratory depression. Your doctor will have told you if you have any of these conditions. Symptoms may include breathlessness, coughing or breathing more slowly or weakly than expected
- If you have heart failure secondary to lung disease (cor pulmonale)

Warnings and precautions

Talk to your doctor, pharmacist or nurse before taking

- If you are elderly, as elderly people may react differently to this medicine. The dose may need to be adjusted.
- If you have a chronic kidney and/or liver disease. The dose may need to be adjusted.
- If you are addicted to narcotics or alcohol
- If you have gallbladder disease or gallstones If you have a head injury or increased pressure in
- If you have reduced consciousness
- you are taking medication for depression (moclobemide or other MAO-inhibitors) or have stopped using this medication within the last 2
- If you have reduced adrenal glands function
- If you have underactive thyroid, the dose may need to be adjusted.
- Low blood pressure with decreased blood volume
- Inflammation of the pancreas
- If you have prostatic hyperplasia (enlargement of the prostate) and/or conditions predisposing to urinary retention. If you have an infection or inflammation of the intes-
- tines since inhibition of peristalsis may increase the risk of uptake of toxins and development of an enlarged colon and perforation of your intestines. If you suffer from epilepsy
- If you take other medicines against diarrhoea
- If you experience seizures
- If you have a bleeding in your stomach and/or intes-
- If you take medicine against increased blood pres-

If you experience difficulty to urinate a health care professional should be contacted. Dropizol is not recommended before surgery or within

24 hours after operation due to risk of paralytic ileus. The symptoms of which are nausea and vomiting.

Risk for dependence and tolerance when using the

Children and adolescents

Dropizol should not be used in children and adolescents aged below 18 years

Other medicines and Dropizol

Tell your doctor or pharmacist if you are taking, have

recently taken or might take any other medicines. It is especially important that you tell your doctor or pharmacist if you are taking:

- Medicines that potentiate the reduced consciousness and difficulty breathing, seen with Dropizol, such as
 - Alcohol
 - Sleeping medicines (e.g. zolpidem) and general anaesthetics (e.g. barbiturates)

- Medicines to treat depression (Tricyclic antidepressants) or Parkinson's disease (MAOinhibitors, e.g. safinamide)
- Antipsychotic medicines with a sedative action (e.g. phenothiazines)
- Medicines to treat epilepsy (gabapentin)
- Medicines to relieve nausea and vomiting (e.g. bromopride, meclizine, metoclopramide)
 - Medicines to relieve allergy (antihistamines, e.g. carbinoxamine, doxylamine)
- Other opioid pain relievers (e.g. alfentanil, butorphanol, fentanyl, hydrocodone, hydromorphone, levorphanol, meperidine, methadone, oxycodone, oxymorphone, remifentanil, sufentanil, tapentadol, tramadol).
- Medicines that have a similar mode of action as morphine and therefore may increase withdrawal symptioms and reduce therapeutic effect (buprenorphine, nalbuphine, nalmefene, naltrexone, pentazocine)
- Medicines to treat alcohol abuse (disulfiram) or medicines to treat certain kinds of infections (metronidazole) as this might cause unpleasant side effects such as flushing, rapid breathing and fast heart rate
- Medicines treat tuberculosis (rifampicin) to decreases the effect of morphine
- Amphetamine and analogues can reduce the sedative effect of opioids.
- Loxapine and periciazine can increase the sedative effect of opioids.
- Concomitant use of flibanserin and opioids may increase the risk of CNS depression.
- Opioids can increase the plasma concentrations of desmopressin and sertraline
- Zidovudine (medicine to treat or prevent HIV infec-
- Medicines to treat depression (fluoxetine) might reduce the duration of action of morphine

Concomitant use of Dropizol and sedative medicines such as benzodiazepines or related drugs increases the risk of drowsiness, difficulties in breathing (respiratory depression), coma and may be life-threatening. Because of this, concomitant use should only be considered when other treatment options are not

However, if your doctor prescribes Dropizol together with sedative medicines the dose and duration of concomitant treatment should be limited by your doctor.

Please tell your doctor about all sedative medicines you are taking and follow your doctor's dose recommendation closely. It could be helpful to inform friends or relatives to be aware of the signs and symptoms stated above. Contact your doctor if you experience such symptoms.

Concurrent administration of morphine may increase the effects of drugs that decrease your blood pressure or other drugs with a lowering effect on your blood pressure.

Dropizol with food, drink and alcohol

Dropizol can be taken with food and drink. Dropizol contains alcohol, so extra care should be exercised when consuming alcohol.

See "Dropizol contains ethanol" below.

Pregnancy, breast-feeding and fertility

If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor or pharmacist for advice before taking this medicine.

Do not take Dropizol during pregnancy unless your doctor has told you to. Dropizol should not be taken close to the date to give birth due to the risk of withdrawal symptoms in the neonate.

Dropizol should only be used during breastfeeding after advice from your doctor, as opium passes into human milk. Infants should be closely watched for sign of sedation or difficulties to breath

Fertility

It is unknown whether morphine may harm your fertility. Fertile men and women should use effective contraception when using Dropizol.

Driving and using machines

Dropizol contains morphine and ethanol and it may cause drowsiness and significantly affect your ability to drive or operate machines.

Do not drive after taking your medicines until you know how they affect you.

Dropizol contains ethanol

This medicinal product contains 33 vol % ethanol (alcohol), i.e. up to 260 mg per dose, equivalent to 6.6 ml of beer or 2.8 ml of wine per dose. Harmful for those suffering from alcoholism. To be taken into account in pregnant or breast-feeding women, children and high-risk groups such as patients with liver disease, or epilepsy.

3. How to take Dropizol Always take this medicine exactly as your doctor told you. Check with your doctor or pharmacist if you are

The recommended dose in adults is:

Adults: 5-10 drops 2-3 times daily.

Single dose should not exceed 1 ml and the total daily dose should not exceed 6 ml.

Elderly: The dosage should be reduced initially.

Hepatic impairment: Dropizol should not be used or the dosage should be reduced. Please see section 2 "Do not take" and section 2 "Warnings and precautions".

Renal impairment: Dropizol should not be used or the dosage should be reduced.

Please see section 2 "Do not take" and section 2 'Warnings and precautions".

There are 20 drops in 1 ml.

Method of administration:

Dropizol can be used undiluted or mixed in a glass of water. After mixture with water, it should be used immediately. If Dropizol is used undiluted the correct dosage can be administered with a spoon.

Use in children and adolescents

Dropizol should not be used in children and adolescents below 18 years.

If you take more Dropizol than you should

If you take too much Dropizol you may experience small pupils, slow heartrates, low blood pressure, lung edema, breathing difficulties and depressed levels of consciousness which may lead to coma. doctor if you have taken more Dropizol than your doctor has prescribed for you or as stated in this leaflet and you feel uncomfortable.

If you forget to take Dropizol

You should take the missed dose as soon as you remember, unless it is nearly time for the next dose. Do not take a double dose to make up for a forgotten dose.

If you stop taking Dropizol

Continue taking the medicine as long as your doctor has told you to

If you have any further questions on the use of this medicine, ask your doctor, pharmacist or nurse.

4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everybody gets them.

Common (may affect up to 1 in 10 people): Difficulty urinating

Uncommon (may affect up to 1 in 100 people):

Shortness of breath, fatigue, anxiety, bluish tinge of the lips, fingers and toes, headaches, confusion, seizures and swelling in the legs and feet (Respiratory depression).

Cardiac arrhythmia (fast or slow heartbeat)

Other side effects

Very common (may affect more than 1 in 10 people): Drowsiness and constipation, dry mouth

Common (may affect up to 1 in 10 people):

Dizziness, headache, pupil contraction, nausea and vomiting, loss of appetite, indigestion or discomfort, changes in taste and smell, urticaria, sweating, bronchospasm, decreased coughing, asthenia

Uncommon (may affect up to 1 in 100 people): Facial flushing, itching, spasms in the lower urinary tract, abnormal liver tests

Rare (may affect up to 1 in 1,000 people):

Increase in pancreatic enzymes (seen in a blood test) and inflammation of the pancreas, pain because of kidney stones (renal colic) or gallstones (biliary colic), withdrawal symptoms, orthostatic hypotension (a form of low blood pressure that happens when you stand up from sitting or lying down)

Very rare (may affect up to 1 in 10,000 people):

Difficulty breathing, muscle cramp, seizures, burning and stinging pain, increased sensitivity to pain, blurred vision, double vision, involuntary movement of the eye, a condition where the bowel does not work properly (ileus), abdominal pain, rash, swelling of the hands, ankles or feet, feeling unwell, shivering, syndrome of inappropriate antidiuretic hormone (SIADH) (symptoms: nausea, malaise, headache, exhaustion and in severe cases may progress to seizures and coma), absence of menstrual bleeding.

Not known (frequency cannot be estimated from the available data):

Adrenal insufficiency (fatigue, weight loss, fainting, low blood sugar, nausea, diarrhea, vomiting and abdominal pain), Euphoria (strong sense of well-being, happiness and excitement), uncontrolled muscle movements, addiction, dysphoric mood (sad, without energy), restlessness, decreased libido or potency, hallucinations, vertigo and fever.

Reporting of side effects

If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme Website: www.mhra.gov.uk/vellowcard or seach for MHRA Yellow Card in the Google Play or Apple App Store

By reporting side effects you can help provide more information on the safety of this medicine.

5. How to store Dropizol

Keep this medicine out of the sight and reach of chil-

Do not use this medicine after the expiry date which is stated on the carton and bottle. The expiry date refers to the last day of that month.

This medicinal product does not require any special storage conditions.

After first opening, the bottle may be used for 4 weeks.

Do not throw away any medicines via wastewater or household waste. Ask your pharmacist how to throw away medicines you no longer use. These measures will help protect the environment.
